Groundwater Quality 2020+

The Decade of Drinking Water Solutions

The past decade has brought us extended drought, the Human Right to Water, the Sustainable Groundwater Management Act, the creation of the Safe and Affordable Drinking Water Program, and a reorientation of the Irrigated Lands Regulatory Program on groundwater quality and safe drinking water. The coming years will be shaped in large part by efforts to implement these initiatives of the past decade.

On the doorstep of a new decade, NCWA and the Sacramento Valley Water Quality Coalition have assembled a panel of speakers central to implementation of key components of these initiatives, including the risk assessment and needs analysis elements of SB 200, the nitrate and salinity priorities of CV-SALTS, and the latest research modelling that characterizes agriculture's probable contributions to groundwater quality.

Come hear the insights from those who will craft and influence the development and implementation of these policies.

Patrick Pulupa, Central Valley Regional Board Executive Officer
Agriculture's Role in Advancing Safe Drinking Water

Darrin Pohlemus, State Water Board Deputy Director, Division of Drinking Water
Implementing Needs Assessment – Safe and Affordable Drinking Water Act

John Borkovich, State Water Board Groundwater Monitoring Section Chief
Domestic Well Needs Assessment and Aquifer Risk Mapping

Dr. Thomas Harter, UC Division of Agriculture and Natural Resources, Groundwater
Where Did My Nitrate Go – Next Level Contaminant Transport Modeling

DETAILS

Monday
December 16

8:30am - 12:00pm

Yuba County Board
of Supervisors
Chambers
915 8th Street,
Suite 109
Marysville
